Projects:

- **CareCloud Charts:** Desktop application used by doctors to manage electronic health records and patient data.
- **CareCloud Central:** Suite of desktop applications used for appointment scheduling, billing, patient records, and medical claims processing.

Responsibilities:

- API Testing using Postman.
- Create Documentation of the projects like (Scope Document, User Manual).
- Conduct feature testing, regression testing, boundary testing, and performance testing.
- Reporting the encountered issues on the Project Management Tool (Trello).
- Communication with the developers (Slack).
- Worked with Agile methodology.
- Prepare Test Cases and Test Plans to launch testing for a project.
- Execute, and automate test plans and test cases.
- Perform Load testing to ensure the efficiency of project.
- Prepare the software documentation related to requirements and testing.
- Bug report preparation for assistance to the development team for bug fixing.
- Mobile app testing manually.

Projects:

- **Greetr:** Video streaming platform allowing clients to record personalized messages for businesses. Conducted UI, cross-browser, and functional testing, and ensured load capacity for 5,000 users.
- **NextEats:** Web-based restaurant management system. Handled UI/UX validation, wrote detailed test cases, and stress tested for 7,000 concurrent users.
- **Thessa B2B:** Online B2B marketplace. Tested admin and customer sides, verified designs with Figma, and ensured responsive layout across devices.
- **Tealpot:** Freelancing platform with separate modules for buyers and sellers. Took over QA mid-development, performed full-cycle testing and continuous updates based on client feedback.
- **Game Coin:** Membership management app for sports fans. Tested mobile and web versions, verified payment integration, and ensured usability across platforms.
- **FOS (Fabric Ordering System):** Web platform for fabric retailers and wholesalers. Focused on order

workflow testing, user access control, and inventory validation. Conducted UI testing and regression checks on admin/customer portals.

- **iControl:** IoT-based web and mobile platform for remote device control (smart homes/offices). Tested real-time functionalities, device pairing, control commands, and app synchronization across platforms.

EDUCATION

BS Software Engineering, 2024
